

# ADVANCED DIVING SKILLS

## ONE HAND NUMBERING

**D**ecompression time, depth, cylinder pressure are all examples of underwater communications that require numbers. Many times a diver has only one hand available because his other hand is busy with extra equipment, cameras, jon line etc. A system was needed that allowed quick number communications between divers using only one hand. Below is the one hand number communication system use by many cave and wreck explorers.

### Advanced Diving Skills:

Advanced Diver Magazine recognizes the value of new techniques and equipment designed or modified to meet the unique needs of divers around the world. Whether developed for exploration of new sites or out of convenience after many dives in one location, this page is your forum for sharing ideas that may benefit other divers.
